

OVERFLOW INFINITY POOLS CONTROL

Overflow infinity pools require that there is always an optimum level of water to have an efficient filtration of the system and a good overflow effect. Solution for the control of the filtration pumps of this type of swimming pool: **the electronic panels for overflowing swimming pools**. Equipped with our electronic devices, specially designed for this type of installation. With this equipment, the overflow pool filtration pump and the water level of the **compensation tank** can be controlled. It includes an electronic system for protection against errors in the installation of the electrodes and an electronic safety system in case of rain that allows controlling the pump.

R78SD3-R78SD4

Electronic control panel for **overflow infinity pool** to connect an existing electric pool panel. It includes **electronic control SD3**, 4 electrodes, output 24VAC for valve and light level indicators. Protection against installation errors of the electrodes.

SD3-SD4-SD5-SD6-

Electronic controls **SD3-SD4-SD5-SD6** to control **overflow infinity pools**. It includes level led indicators. Protection against installation errors of the electrodes. Electronic control by 4 **conductive probes**.
